FINAL ACTION
DETAILED ACTION

1. Applicant's Amendment filed January 30, 2006 has been entered. Claims 2 and 10 have been amended. Claims 24 – 33 have been canceled. Claims 1 – 23 are pending.

Response to Arguments

2. Applicant's arguments filed January 30, 2006 have been fully considered but they are not persuasive.

Contrary to applicant's remarks under the claim rejections under 102(e), the Korean priority filing date of the application does not suffice to overcome the rejection without the English translation of the certified priority document (see MPEP § 706.02(b), part E).

Therefore, the claims rejection remains as follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al. (US Pat 6,862,245 B2).

Regarding **claims 1 and 9**, Kim et al. disclose a dual port semiconductor memory cell (figs. 4 and 5), comprising:

a first CMOS inverter (I3) including a first NMOS transistor (N7), a first PMOS transistor (P4), and input port (coupled at node n3), and an output port (coupled at node n4);

a second CMOS inverter (I4) including a second NMOS transistor (N8), a second PMOS transistor (P5), an input port coupled to the output port of the first CMOS inverter and constitutes a first memory node together with the output port of the first CMOS inverter (at node n4), and an output port coupled to the input of the first CMOS inverter and constitutes a second memory node together with the input port of the first CMOS inverter (at node n3);

a third NMOS transistor (N5) having a gate coupled to a word line, a drain coupled to a bit line (BL), and a source coupled to the first memory node (node n3);

a fourth NMOS transistor (N6) having a gate coupled to the word line, a drain coupled to a complementary bit line (BLB), and a source coupled to the second memory node (node n4); and

a third PMOS transistor (P6) having a gate coupled to a scan address line (line SS from scan row decoder 14, fig. 5), a source coupled to the second memory node (node n4), and a drain coupled to a scan data-out line (line SL coupled to Sout, fig. 5);

wherein the plurality of memory cells are arranged in symmetry with respect to boundaries thereamong (fig. 5, memory cells MCs arranged symmetrically with respect to boundaries including surrounding memory cells).

5. The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Allowable Subject Matter

6. Claims 2 – 8, 10 – 16, and 17 – 23 are allowed.

7. The examiner's statement of reasons for allowance was provided in the previous Office Action mailed on November 01, 2005.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
